SPRING FEVER IS HERE!!!

The Staff of the East Kentucky Science Center has been busy preparing to open our new exhibit "Our Weakening Web" which is now on display.

Our Weakening Web is an interactive exhibit that will give visitors an inside look at how easy it is for wildlife to become endangered and possibly extinct. Travel back with the Weakening Web timeline to find out how creatures of long ago fell victim to extinction. Discover how uncontrolled development leads to destruction of wildlife habitats and puts many species in danger of not being able to survive in Getting Wildlife out of the Way. Uncover a seaside sanctuary that is out of this world, providing a safe habitat for species at Florida's Canaveral National Sea Shore and nearby Merritt Island National Wildlife Refuge thanks to NASA and the U.S. Department of Fish and Wildlife.

Our Weakening Web was funded by The National Science Foundation and designed by The Cincinnati Museum of Natural History. It is being sponsored at the East Kentucky Science Center by Equitable Resources, Olin and Muriel Prather Foundation and Chesapeake Energy.

To bring a school group, your family, or just to learn for yourself what you can do to help "Our Weakening Web" call 606-889-0303 or visit us on the web at www.wedosscience.org.
